Dear Sir or Madam;

With this letter, I would like to express my interest in studying Masters in Computer Science and Engineering at the university of Politecnico di Milano.

From an early age I've always been deeply interested in computing. It was my dad, introducing me to the computer systems at his work place that first sparked this interest. I can always remember the feeling of wanting to know just how computers worked, why they worked and what else they could do. This interest never left me, only growing more profound and passionate with every new discovery I made. From communicating with an artificial intelligence to seeing the wonders of the Internet for the first time, computers have left me fascinated with just how much power yet mystery they hold.

The Levels I chose to study have all helped me to develop both myself and my understanding of the subject. In high school Physics for example has helped me to understand how certain parts of a computer function, while Computing has given me a greater insight into the field of the computer industry.

Math's and Physics have both helped to improve my analytical and evaluative skills. Within math's I have been lucky enough to have a lecturer who was very interested in computer science. He has been especially helpful, lending me books such as C# in depth, C# design patterns. This has given me an insight into the richness that is computer science. With this background I join Addis Ababa Science and Technology University, in my university life I study Computer Engineering for five years.

My interest in computing has not been restricted to the classroom and college life. I want to discover more about computing that's why I want to join to your university.

Sincerely,

Michael Mogos Birhanu
